

Stage I Frontier Advancement

Aligned restatement
construction

Compact view +
budget reinvestment

Combination-operation
exposure audit

Adapter-aware
evaluation repair

Frozen reference
endpoint (42.02)

reverse
correction

Stage II Principle Discovery

Scalar data value
rejected

Relation-typed
installation verified

Cheaper-explanation
gradient absorption

Same-window
causal locality

Split / transfer /
architecture checks

reverse
correction

Stage III Principle-Guided Advancement

Dense 2nd-view mask
+ sparse focus labels

Ordinary-mask parent
preservation

Dense-view KL control:
prediction confirmed

Matched rollback +
scale-down controls

Two-seed policy
ladder (42.25 / 42.23)
